## POWER ANALYZER

Versatile power analyzer for AC/DC load and standby current characterization with graphical displays such as harmonic analysis, waveform and trend chart functions

### Description

In harmonic analysis, the R&S®NPA501 power analyzer graphically displays up to the 50th harmonic in a logarithmic amplitude scale. The user-configurable, dual-channel trend chart function for U, I, P, S, Q and F is unique in this class of instruments.

The brilliant QVGA color display (320 × 240 pixel) simultaneously displays up to 10 user-configurable measurement results with a refresh rate of 10 measurements per second.

The instrument has a basic accuracy of 0.05%. Signals are acquired from DC to 100 kHz at a sampling rate of 500 ksample/s. Current and voltage are displayed with 16 bit resolution.

The logging function lets users store measured data with a timestamp in .CSV format for a nearly unlimited period of time. Screen content can also be saved to a USB flash drive anytime at the push of a button.

A PASS/FAIL function lets users monitor numerous measurement results.
